

PROJECT LUMI

Learning Using Multiple Inferences

A personal learning platform that turns your own study material into an interactive learning journey.

From notes → understanding → practice → revision

LUMI

Good evening, Khushi

Learning

01 • THE PROBLEM

Why Is Studying Still So Fragmented?

Students have information everywhere — but learning is rarely one connected experience.

- Switching between tools breaks study flow.
- Complex concepts often need multiple explanations.
- Revision is easy to postpone without structure.

02 • THE IDEA

One Learning Flow. Five Powerful Moments.

Lumi connects the complete journey around the student's own material.

The student stays in one environment while the learning mode changes.

03 • FEATURE

Turn Your Notes Into Your Own Learning Space.

Lumi starts with what the student is actually studying.

FILE

TEXT EXTRACTION

KNOWLEDGE
BASE

- Automatically extracts text from supported files.
- Creates a custom knowledge base from uploaded material.
- Keeps learning grounded in the student's course content.

04 • FEATURE

Stuck on a Doubt? Just Ask Lumi.

A direct conversational path from confusion to clarity.

Lumi conversation

What is process scheduling?

It is the method an OS uses to decide which process gets CPU time and when.

Ask another question...

WHY IT MATTERS

**Less searching.
More understanding.**

- Ask questions directly while studying.
- Use available course context for relevant answers.
- Move from doubt → explanation without breaking flow.

05 • FEATURE

Complex Concepts. Made Simple.

Switch explanation depth when the topic becomes too technical.

Explanation mode

Standard

ELI10

Explain Like I'm 10

Break the theory into smaller ideas, plain language, and relatable examples.

COMPLEX

CLEAR

Concept

“Imagine the CPU as a teacher deciding which student speaks next.”

Simple language • Smaller steps • Better recall

06 • FEATURE

Read Less. Practice More.

Generate interactive assessments directly from the material.

QUIZ • OPERATING SYSTEMS

Which component manages the allocation of CPU time among processes?

A Scheduler

B Compiler

C Loader

D Browser

ACTIVE RECALL

Read → Remember → Check yourself

- Questions are generated from uploaded material.
- Interactive format encourages active recall.
- Immediate practice reveals knowledge gaps.

07 • FEATURE

Never Wonder “What Should I Revise?” Again.

Turn a pile of topics into a structured review path.

FROM TOPICS TO HABITS

**A clear next step
reduces study friction.**

- Creates structured study and review schedules.
- Organizes topics into manageable review paths.
- Supports consistent revision instead of last-minute cramming.

08 • THE PIPELINE

One Product. The Complete Learning Cycle.

Every feature has a role — together they create a continuous learning loop.

↪ **CONTINUE LEARNING**

Notes become context. Context becomes interaction. Interaction becomes practice.

PROJECT LUMI

From notes to understanding.

Lumi brings explanation, interaction, practice, and revision into one connected learning experience.

Learning Using Multiple Inferences

Thank you
